

## Hydewa Mounting Rail

The new, innovative mounting rail for the Hydewa renovation panel!

This offers numerous advantages and is specially designed to meet the highest demands. See for yourself the special features that make it the ideal solution for your building project.

### The advantages at a glance:

#### 1. flexibility with temperature and pressure changes:

Thanks to specially designed spacers (H- and U-mounting rail 10 mm), material expansions are absorbed by the panel. These spacers react flexibly to temperature fluctuations and pressure changes, optimally compensating for stresses in the system.

#### 2. more room for cover layers:

Thanks to the special design, there is no direct contact between the cover layers and the mounting rail, which provides additional scope for thermal expansion or movement.

#### 3. stable design:

The mounting rail impresses with its robust design with a material thickness of up to 3 mm, which ensures high stability and load-bearing capacity.

#### 4. pre-drilled mounting rails:

For easier and faster installation, the mounting rails are pre-drilled and countersunk every 30 cm. This not only saves time, but also ensures more precise installation.

#### 5. rounded edges

The rounded edges of the rail make it easier to insert into the panel, reduce resistance and prevent damage during installation.

#### 6. lower installation height in the rear area:

The mounting rail is characterized by a lower installation height on the wall side, which ensures less cavity between the panel and the wall.

#### 7. matching U-mounting profiles:

We offer matching U-mounting profiles that ideally complement the system and are a clean and stable solution for your installation.
