FRP = FIBERGLASS REINFORCED PLASTIC

We add a splash of color.

Decorative panels are more in demand than ever when it comes to surface design. This means that our premium product Glasbord® is no longer only used in hygienically sensitive areas, but also in all other areas.

Public buildings, stores, hotels, restaurants, wellness and sanitary areas or even the healthcare sector - the possible applications for our decorative material are virtually unlimited.

In gastronomy, our decorative surface creates a cozy atmosphere and thus a special experience for visitors. In sanitary and wellness areas, the synergy of walls and ceiling creates an individual and harmonious appearance.

The flexible products allow installation companies and shopfitters every opportunity to use the panels to present rooms in the right ambience.

There are no limits to imagination and design, as the material can score points in terms of both color and texture.

Designs Collection

Designs are made of glass fiber reinforced synthetic resin (FRP), which is printed and coated with a protective lacquer.

Product specification
